ANKU JEREMIAH COBLAH

Data Engineer | Pipelines & Warehouse Modelling | SQL & Python

jeremiah.anku.coblah@gmail.com • +233 24 399 7081 • Github • LinkedIn

SUMMARY

Data Engineer with about 2 years of experience building ETL/ELT pipelines and warehouse models that other teams rely on, using Python, SQL, Apache Airflow, and dbt. Comfortable owning pipeline orchestration end to end — scheduling, dependencies, and failure handling and building in data quality checks so outputs can be trusted. Experience with both streaming pipelines (Kafka, Spark) and batch ETL, and with modelling data for reporting in Redshift and Snowflake. Interested in applying this background to the data layer behind AI systems and evals.

AREAS OF EXPERTISE

Data Engineering & Pipelines: ETL/ELT Pipelines | Apache Airflow | dbt | Pipeline Orchestration | Data Modelling

Data Warehousing: Snowflake | Amazon Redshift | Star Schema Design | OLAP Systems

Streaming & Big Data: Apache Kafka | Apache Spark | Real-Time & Batch Processing

Data Quality & Governance: Data Validation | Data Quality Testing | Data Lineage | Data Governance

Databases & SQL: SQL | PostgreSQL | MySQL | MongoDB | Query Tuning

Cloud Platforms: AWS (S3, Glue, Lambda, Redshift, DynamoDB)

Programming: Python | SQL

Reporting & Visualisation: Power BI | Grafana | Metabase | Matplotlib

WORKING EXPERIENCE

Data Engineer, Amalitech *Nov 2025 – Oct 2026 | Kumasi (On-site)*

- Built ETL/ELT pipelines using Python, Apache Airflow, and dbt, cutting pipeline failure rates by an estimated 35%.
- Built and maintained warehouse models in Amazon Redshift and Snowflake to support downstream reporting, improving query performance by an estimated 45%.
- Built real-time streaming pipelines using Apache Kafka and Apache Spark, reducing data delivery lag by an estimated 40%.
- Enforced data quality and lineage checks across pipelines and warehouse layers to keep outputs consistent and traceable.

Backend / Data Engineer, BenchFive (Internship) *Sep 2024 – Jan 2025 | Remote*

- Used Python (Pandas) to clean, transform, and validate scraped and ingested datasets before storage and analysis.
- Built web scraping workflows to automate collection of external data that previously required manual effort.
- Developed REST APIs using Django REST Framework to serve ingested data to downstream systems.

PROJECTS

Amalitech Office Management System (Work Project)

PostgreSQL · SQL Views · ETL Pipelines · Relational Schema Design

- Designed a relational database schema for a multi-tenant Office Management System covering 10+ business domains.
- Built an attendance ETL pipeline that processes badge-reader events into daily status and punctuality records.
- Developed 50+ SQL views providing attendance, occupancy, and absenteeism KPIs for employees, managers, HR, and Facilities teams.

Music Streaming Data Pipeline (Personal Project)

AWS S3 · EventBridge · SQS · Step Functions · Glue (PySpark) · CloudWatch · Terraform

- Built a personal AWS pipeline (S3, EventBridge, SQS, Step Functions) to ingest and process simulated music streaming events.
- Wrote AWS Glue jobs (PySpark and Python Shell) to clean, transform, and aggregate genre-level listening metrics.
- Set up CloudWatch logging and Slack alerts to track job status, and used Terraform to provision the AWS infrastructure.

Lakehouse Architecture for Ecommerce Transactions (Personal Project)

AWS S3 · Glue · PySpark · Delta Lake · Step Functions · GitHub Actions

- Built a small data lakehouse on AWS, loading sample e-commerce transaction data from S3 into Delta Lake tables using Glue and PySpark.
- Added data quality checks (null checks, timestamp validation, deduplication) before loading data, logging rejected records for review.
- Automated the pipeline with AWS Step Functions and set up basic CI/CD for the Glue scripts with GitHub Actions.

Real-Time Customer Heartbeat Monitoring System (Personal Project)
Kafka · Spark Structured Streaming · PostgreSQL · Grafana · Docker Compose

- Simulated real-time patient heart-rate data and streamed it through Kafka and Spark Structured Streaming.
- Wrote the Spark job to validate incoming JSON events and store processed records in PostgreSQL.
- Set up Grafana dashboards on PostgreSQL to visualize the simulated heartbeat data, running the stack locally with Docker Compose.

EDUCATION

Bsc. Computer Science *2021 – 2025 | Kumasi*
Kwame Nkrumah University of Science and Technology

- Final-year project: built a sepsis prediction system using a CNN-LSTM model on clinical time-series data, with SHAP-based explainability.

Wassce, Bishop Herman College *2018 – 2021 | Kpando*

CERTIFICATIONS

- AWS Certified Cloud Practitioner — Amazon Web Services (AWS)
- Machine Learning Engineer Certification — DataCamp
- Data Engineer Associate Certificate — DataCamp

OTHER EXPERIENCES

Agile Developer, Xcelsz (Contract) *Nov 2023 – Oct 2024 | Kumasi, Remote*

Back End Developer, Ideation Axis Group (Internship) *Sep – Nov 2024 | Remote*

Mobile Application Developer, Zap Technology (Internship) *Oct – Dec 2023 | Kumasi, Remote*

- React Native, Redux Toolkit, Firebase

Web Developer, GI-KACE (Internship) *Sep – Oct 2023 | Accra (On-site)*

- FastAPI, PostgreSQL, HTML/CSS/JavaScript
