ANKU JEREMIAH COBLAH

Software Engineer | Python | API Integration | Backend Systems | Voice AI

jeremiah.anku.coblah@gmail.com • +233 24 399 7081 • Github • LinkedIn

SUMMARY

Software Engineer with about 3 years of hands-on experience writing clean, well-tested backend code in Python and Node.js, building and integrating third-party APIs, and shipping production systems across fintech, e-commerce, and healthcare domains. Experienced integrating complex APIs with strict attention to data accuracy, real-time error handling, and failure-state management — never allowing a system to present data it has not genuinely retrieved. Comfortable working directly alongside a technical lead, taking clear direction, reporting blockers early, and documenting code so others can maintain it. Additional background in machine learning (CNN-LSTM models, SHAP explainability, TensorFlow/Keras) and data engineering provides strong instincts for how AI layers connect to live operational systems — directly relevant to supporting voice-AI integration and testing work. Frontend-capable in React and Next.js, enabling full end-to-end contribution when the role calls for it.

AREAS OF EXPERTISE

Backend & API Development: Python (FastAPI, Django REST Framework) | Node.js (NestJS) | REST API Design | Third-Party API Integration | Real-Time Error & Failure Handling | WebSockets (Socket.IO) | Authentication (JWT, OAuth 2.0) | ExpressJs

Languages: Python | TypeScript | JavaScript | SQL

Frontend: React | Next.js | HTML | CSS | Tailwind CSS | JavaScript

Mobile App: React Native | Firebase

Databases: PostgreSQL | MongoDB / Mongoose | MySQL | Query Optimization | Data Modelling | SQLAlchemy ORM

AI / ML: TensorFlow / Keras | SHAP (Explainability) | CNN-LSTM Models | ML Pipeline Integration | Data Preprocessing & Validation

Cloud & DevOps: AWS (S3, Glue, Lambda, DynamoDB) | Docker | CI/CD (GitHub Actions) | Redis | Terraform

Testing & Tooling: Jest | Postman | Swagger / OpenAPI | Git | Version Control in Shared Codebases

WORKING EXPERIENCE

Software / Data Engineer, AmaliTech *Nov 2025 – Oct 2026 | Kumasi, Ghana (On-site)*

National Service Personnel (NSP)

- Wrote and maintained Python backend services and REST API endpoints exposing 50+ analytical views to internal dashboards, ensuring responses are accurate and never surface unretrieved data.
- Integrated multiple third-party and internal data sources into the backend pipeline, handling real-time requests, error states, and failure scenarios.
- Engineered backend services for a multi-tenant Office Management System covering seat availability, no-show detection, and attendance tracking.
- Designed and deployed real-time data streaming services using Apache Kafka and Apache Spark, reducing data delivery lag by up to 40%.
- Built and optimized ETL/ELT pipelines in Python with Apache Airflow and dbt, cutting pipeline failure rates by 35%.

Agile Developer, Xcelsz (Contract) *2024 – 2025 | Remote*

- Contributed to the backend of an internal business application, designing RESTful API endpoints within an Agile team.
- Collaborated with cross-functional team members to translate requirements into documented, maintainable backend services. ● Applied version control discipline in a shared codebase, keeping commits clean and service contracts intact.

Backend Developer, BenchFive (Internship) *Sep 2024 – Jan 2025 | Remote*

- Developed RESTful APIs in Python (Django REST Framework), integrating external data sources with strict validation before serving through the API layer.
- Engineered web scraping and ingestion workflows to extract, clean, and validate large volumes of external data.
- Collaborated across the API boundary with a Next.js frontend, aligning response shapes with UI requirements.

PROJECTS

Amalitech Office Management System — Internal Enterprise Backend

Java · PostgreSQL · SQL Views · ETL Pipelines · REST API · JWT Auth · RBAC

- Designed the relational database schema for a multi-tenant system spanning 10+ business domains.
- Built seat-availability and no-show detection services, exposed via authenticated REST endpoints for HR and Facilities dashboards.
- Architected 50+ role-specific REST endpoints with RBAC, auth guards, and pagination.
- Wrote SQL views and built the attendance ETL pipeline deriving daily statuses and punctuality flags from raw badge-reader events.

Sepsis Prediction API — AI-Integrated Clinical Backend

Python · FastAPI · TensorFlow/Keras · SHAP · SQLAlchemy ORM · JWT Auth · SendGrid · Next.js · Tailwind CSS

- Built the FastAPI backend integrating a live CNN-LSTM model, with manual and batch-prediction endpoints.
- Implemented SHAP-based feature-importance explanations alongside every AI prediction.
- Integrated with a Next.js clinical dashboard: CSV bulk upload, real-time risk scoring, and exportable PDF/CSV reports via SendGrid. ● Auto-generated interactive API docs (Swagger UI / ReDoc) to keep the contract in sync.

CampusBid — Campus E-commerce Platform (Backend + Next.js Frontend)

NestJS · MongoDB/Mongoose · Redis · Socket.IO · JWT + Google OAuth · Paystack · Next.js · Tailwind CSS · Jest

- Built the backend for a campus marketplace: 10+ feature modules, escrow-style Paystack payment flow, real-time WebSocket chat, and Redis caching.
- Integrated Paystack and Cloudinary APIs, handling real-time payment states, failure cases, and refund edge cases.
- Covered the service with 167 unit tests across 14 suites (Jest), documented against a live Swagger/OpenAPI schema.

Real-Time Collaborative Whiteboard

NestJS · Socket.IO · MongoDB/Mongoose · Next.js · Tailwind CSS

- Built a real-time collaborative backend with NestJS and Socket.IO — canvas rooms, draw-event broadcasting, and input throttling to sustain 60 FPS under load.
- Integrated with a Next.js + Tailwind frontend end-to-end, configuring CORS and aligning API contracts.

EDUCATION

Bsc. Computer Science *2021 – 2025 | Kumasi*

Kwame Nkrumah University of Science and Technology

- Final-year project: built an end-to-end AI system integrating a CNN-LSTM sepsis-risk model with a Python/FastAPI backend and a Next.js clinical dashboard.

CERTIFICATIONS

- AWS Certified Cloud Practitioner — Amazon Web Services (AWS)
- Machine Learning Engineer Certification — DataCamp
- Data Engineer Associate Certificate — DataCamp

OTHER EXPERIENCES

Mobile Application Developer, Zap Technology (Internship) *Oct 2023 – Dec 2023 | Kumasi, Ghana (Remote)* ● React Native, Redux Toolkit, Firebase — Mobile Application Development.

Web Developer, GI-KACE (Internship) *Sep 2023 – Oct 2023 | Accra, Ghana (On-site)*

- FastAPI, PostgreSQL, HTML, CSS, JavaScript — Full-Stack Development.
